**FOREWORD**

The information contained in this service manual has been prepared for the professional automotive technician involved in daily repair operations. Information in this manual is divided into groups by transaxle or transmission models. Each group is further divided to address individual components within the group. These groups contain general information, specification, removal and installation, disassembly and reassembly procedures for the components. The first page of each group contains an alphabetical index to assist in finding the location of the component. The information, descriptions, and specifications were in effect at the time this manual was released.

Maintenance and Servicing Procedures

1) A diagram of the component pads is provided near the front of each section in order to give the reader a better understanding of the installed condition of component parts.

2) The numbers provided within the diagram indicate the sequence for maintenance and servicing procedures; the symbol □ indicates a non-reusable part; the tightening torque is provided where applicable.

Removal steps:
The part designation number corresponds to the number in the illustration to indicate removal steps.

Disassembly steps:
The part designation number corresponds to the number in the illustration to indicate disassembly steps.

Installation steps:
Specified in case installation is impossible in reverse order of removal steps. Omitted if installation is possible in reverse order of removal steps.

Reassembly steps:
Specified in case reassembly is impossible in reverse order of disassembly steps. Omitted if reassembly is possible in reverse order of disassembly steps.

Classifications of Major Maintenance/Service Points

When there are major points relative to maintenance and servicing procedures (such as essential maintenance and service points, maintenance and service standard values, information regarding the use of special tools, etc.), these are arranged together as major maintenance and service points and explained in detail.

● Indicates that there are essential points for removal or disassembly.

▲ Indicates that there are essential points for installation or reassembly.

Symbols for Lubrication, Sealants and Adhesives

Information concerning the locations for lubrication and for application of sealants and adhesives is provided, by using symbols, in the diagram of component parts or on the page following the component parts page, and explained.

Grease (multipurpose grease unless there is a brand or type specified)

Sealant or adhesive

Brake fluid, automatic transmission fluid

Gear oil
INTRODUCTION

TRANSFER <AWD>

DISASSEMBLY AND REASSEMBLY

Disassembly steps
1. Cover
2. Cover gasket
3. Extension housing assembly
4. Transfer case sub assembly
5. Spacer
6. O-ring
7. Transfer case adapter sub assembly

Reassembly service points

Installation of transfer case adapter sub assembly

(1) Apply a light and uniform coat of machine blue or red lead to the driven bevel gear teeth (both sides) using a brush.

Lubricate all internal parts with gear oil during reassembly.

This number corresponds to the number appearing in “Removal steps”, “Disassembly steps”, “Installation steps” or “Reassembly steps”.

Operating procedures, cautions, etc. on removal, installation, disassembly and reassembly are described.

FORM-IN-PLACE GASKET
The transaxle and transmission has several areas where the form-in-place gasket (FIPG) is in use. To ensure that the gasket fully serves its purpose, it is necessary to observe some precautions when applying the gasket. Bead size, continuity and location are of paramount importance. Too thin a bead could cause leaks. Too thick a bead, on the other hand, could be squeezed out of location, causing blocking or narrowing of the fluid feed line. To eliminate the possibility of leaks from a joint, therefore, it is absolutely necessary to apply the gasket evenly without a break, while observing the correct bead size.

The FIPG used in the transaxle and transmission is a room temperature vulcanization (RTV) type and is supplied in a 120-gram tube (Part No. MD997740). Since the RTV hardens as it reacts with the moisture in the atmospheric air, it is normally used in the metallic flange areas.

Disassembly
The parts assembled with the FIPG can be easily disassembled without use of a special method. In some cases, however, the sealant between the joined surfaces may have to be broken by lightly striking with a mallet or similar tool. A flat gasket scraper may be lightly hammered in between the joined surfaces. In this case, however, care must be taken to prevent damage to the joined surfaces.

Surface Preparation
Thoroughly remove all substances deposited on the gasket application surfaces, using a gasket scraper or wire brush. Check to ensure that the surfaces to which the FIPG is to be applied is flat. Make sure that there are no oils, greases and foreign substances deposited on the application surfaces. Do not forget to remove the old sealant remained in the bolt holes.

Form-In-Place Gasket Application
When assembling parts with the FIPG, you must observe some precautions, but the procedure is very simple as in the case of a conventional precut gasket. Applied FIPG bead should be of the specified size and without breaks. Also be sure to encircle the bolt hole circumference with a completely continuous bead. The FIPG can be wiped away unless it is hardened. While the FIPG is still moist (in less than 15 minutes), mount the parts in position. When the parts are mounted, make sure that the gasket are applied to the required area only.

The FIPG application procedure may vary on different areas. Observe the procedure described in the text when applying the FIPG.

REMOVAL SERVICE POINTS

A SPRING PIN REMOVAL
(1) Insert the special tool in the spring pin, and attach the round nut to the end of the tool.

(2) While holding the shaft of the special tool, rotate the sleeve to force out the spring pin.

B RELEASE FORK REMOVAL
Slide release fork in direction of arrow and disengage fulcrum from clip to remove release fork. Be careful not to cause damage to clip by pushing release fork in the direction other than that of arrow and removing it with force.

INSPECTION
CLUTCH COVER ASSEMBLY
- Check the diaphragm spring end for wear and uneven height.
  Replace if wear is evident or height difference exceeds the limit.
  Limit: 0.5 mm (.020 in.)
- Check the pressure plate surface for wear, cracks and seizure.
- Check the strap plate rivets for looseness and replace the clutch cover assembly if loose.

CLUTCH DISC
- Check the facing for loose rivets, uneven contact, deterioration due to seizure, adhesion of oil or grease, and replace the clutch disc if defective.
- Measure the rivet sink and replace the clutch disc if it is out of specification.
  Limit: 0.3 mm (.012 in.)
REAR WHEEL DRIVE - HYDRAULIC CONTROL TYPE

Removal steps
1. Transmission
2. Clutch cover
3. Clutch disc
4. Return spring
5. Clutch release bearing
6. Release cylinder
7. Boot
8. Release fork
9. Fulcrum

ATRM0659
**D** RESE APPLICATION TO RELEASE FORK

Specified grease:
MITSUBISHI genuine grease Part No. 0101011 or equivalent

**E** SPRING PIN INSTALLATION

Drive the spring pin with its slit located as shown in the illustration.

Caution
Do not reuse the spring pins.

**F** GREASE APPLICATION TO CLUTCH RELEASE BEARING

Specified grease:
MITSUBISHI genuine grease Part No. 0101011 or equivalent
- Check for torsion spring play and damage and if defective, replace the clutch disc.
- Combine the clutch disc with the input shaft and check sliding condition and play in the rotating direction. If it does not slide smoothly or the play is excessive, check after cleaning and reassembling. If the play is excessive, replace the clutch disc and/or the input shaft.

**CLUTCH RELEASE BEARING**

**Caution**

Release bearing is packed with grease. Therefore do not wash it in cleaning solvent or the like.

- Check bearing for seizure, damage, noise, or improper rotation. Check also diaphragm spring contact surface for wear.
- Replace bearing if its release fork contact surface is abnormally worn,

**RELEASE FORK**

- Replace release fork if its bearing contact surface is abnormally worn.

**INSTALLATION SERVICE POINTS**

**A** GREASE APPLICATION TO RELEASE FORK SHAFT

Specified grease:
- Mitsubishi genuine grease Part No.0101011 or equivalent

**B** GREASE APPLICATION TO RELEASE FORK SHAFT

Specified grease:
- Mitsubishi genuine grease Part No.0101011 or equivalent

**C** GREASE APPLICATION TO RELEASE FORK

Specified grease:
- Mitsubishi genuine grease Part No.0101011 or equivalent
CLUTCH RELEASE CYLINDER
FRONT WHEEL DRIVE TYPE

Disassembly steps
1. Push rod

3. Piston cup
4. Piston
5. Conical spring
6. Cap
7. Bleeder plug
8. Release cylinder
**G** CLUTCH DISC/CLUTCH COVER ASSEMBLY INSTALLATION

(1) Apply specified grease to clutch disc splines and squeeze it in place with a brush.

Specified grease:
MITSUBISHI genuine grease Part No. 0101011 or equivalent

(2) Using clutch disc guide to position clutch disc on flywheel.
Disassembly steps
1. Valve plate
2. Spring
3. Push rod
4. Boot
5. Piston cap
6. Piston
7. Conical spring
8. Cap
9. Bleeder plug
10. Release cylinder

DISASSEMBLY SERVICE POINT

PISTON AND PISTON CAP REMOVAL
Remove the piston from the release cylinder using compressed air.

Caution
1. Cover with shop towel to prevent the piston from popping out.
2. Apply compressed air slowly to prevent brake fluid from splashing.
Disassembly steps
1. Push rod
2. Boot
3. Piston cup
4. Piston
5. Conical spring
6. Cap
7. Bleeder plug
8. Release cylinder
CLUTCH DAMPER
DISASSEMBLY AND REASSEMBLY

Disassembly steps
1. Clutch damper
2. O-ring
3. Clutch damper bracket (W5MG1, W6MG1 only)
4. Clutch damper bracket (F5M33-2-SNQR, F5M33-2-SUQR only)
5. Cap
6. Bleeder plug

INSPECTION
CLUTCH DAMPER
- Check that there are no scratches on the parts indicated in the illustration.
- Clean completely the inside of the clutch damper and confirm that there is no foreign material left.

CLUTCH DAMPER BRACKET
- Check that there are no scratches of cracks on the part indicated in the drawing.
INSPECTION
(1) Check the inner surface of the release cylinder for scratches or irregular wear.
(2) Replace if the piston cup outer circumference is scratched or shows signs of fatigue, or if there is excessive wear of the lip where indicated in the figure.
INSTALLATION SERVICE POINT

° O-RING INSTALLATION

Apply the specified brake fluid onto the O-ring, and securely install it onto the position of the clutch damper indicated in the illustration.

Specified brake fluid: SAEJ1703(DOT3)
GENERAL INFORMATION

37. Gasket

Lubricate all internal parts with gear oil during reassembly.
**DISASSEMBLY SERVICE POINTS**

(A) **LOCK NUTS FOR INPUT SHAFT / INTERMEDIATE GEAR REMOVAL**

1. **Unstake** lock nuts of the input shaft and intermediate gear.

2. **Shift** the transaxle in reverse using the control lever and select lever.

3. **Install** the special tool onto the input shaft.

4. **Screw** a bolt (10 mm (.39 in.)) into the bolt hole on the periphery of clutch housing and attach a spinner handle to the special tool.

5. **Remove** the lock nut, while using the bolt as a spinner handle stopper.

(B) **SHIFT RAIL ASSEMBLY REMOVAL**

1. **Shift** the 1st-2nd speed shift fork to the 2nd speed.

2. **Shift** the 3rd-4th speed shift fork to the 4th speed.

3. **Remove** the shift rail assembly as shown in the illustration so as not to hit the interlock plate and control finger.
Disassembly steps

54. Spring pin
55. Spring pin
56. Shift rail assembly
57. Bolt
58. Bearing retainer
59. Intermediate gear assembly
60. Input shaft assembly
61. Outer race
62. Outer race
63. Oil guide
64. Outer race
65. Oil seal
66. Oil seal
67. Oil seal
68. Magnet
69. Magnet holder
70. Clutch housing assembly

Lubricate all internal parts with gear oil during reassembly.
D. SEALANT APPLICATION TO BEARING RETAINER MOUNTING BOLT

Specified sealant:
- 3M STUD Locking No.4170 or equivalent

E. SHIFT RAIL ASSEMBLY INSTALLATION

(1) Set the 1st-2nd speed shift sleeve at 2nd speed.
(2) Set the 3rd-4th speed shift sleeve at 4th speed.
(3) Install the shift forks to respective sleeves.

(4) Insert the shift rail into the shift fork hole, while turning so as to prevent the shift lug from interfering with the stopper plate.
(5) Turn the shift rail to engage shift lug.

F. SPRING PINS FOR 1ST-2ND SPEED SHIFT FORK / 3RD-4TH SPEED SHIFT FORK INSTALLATION

G. REVERSE IDLER GEAR SHAFT INSTALLATION

(1) Install in the direction as illustrated.
INTERMEDIATE GEAR ASSEMBLY / INPUT SHAFT ASSEMBLY REMOVAL

(1) Lift up the input shaft assembly and remove the intermediate gear assembly.

BEARING OUTER RACE REMOVAL

reassemble service points

A Oil seal for drive shaft installation

B Oil seal for input shaft front installation

INTERMEDIATE GEAR ASSEMBLY / INPUT SHAFT ASSEMBLY INSTALLATION

(1) Lifting up the input shaft assembly, install it simultaneously with the intermediate gear assembly.
SEALANT APPLICATION TO TRANSAXLE CASE
(1) Squeeze out sealant from the tube uniformly without excess or discontinuity.
   Specified sealant: Mitsubishi genuine sealant part No. MD997740 or equivalent

REVERSE IDLER GEAR SHAFT BOLT INSTALLATION
(1) Center the shaft with a Phillips screwdriver [shaft diameter 8 mm (.31 in.)] or the like.
(2) Tighten the reverse idler gear shaft bolt to specified torque.

SNAP RING INSTALLATION
(1) Select the thickest snap ring that can be fitted into the snap ring groove.

DISHED WASHER INSTALLATION
(1) Install the dished washer with the face identified by mark (dent) toward lock nut.

LOCK NUTS FOR INPUT SHAFT / INTERMEDIATE GEAR INSTALLATION
(1) Install the special tool onto the input shaft.
(2) Screw a bolt [10 mm (.39 in.)] into the hole on the periphery of the clutch housing and attach a spinner handle to the special tool.
**H** SPACERS SELECTION

(1) Place solder with a length of approximately 10 mm (.39 in.) and a diameter of approximately 1.6 mm (.063 in.) in the spacer mounting position.

(2) Tighten the case mounting bolt at the specified torque.

(3) Remove the case and then take out the solder. If the solder is not broken, use solder with a larger diameter to carry out the operations in (1) and (2).

(4) Measure the thickness of the crushed solder with a micrometer and select and install a spacer of thickness that gives standard end play and preload.

**Standard value:**

**Input shaft**
- End play
  - 0–0.05 mm (0–.0020 in.) <F5M33>

**Intermediate gear**
- End play
  - 0.05–0.17 mm (.0020–.0067 in.) <F5M21>
- Preload
  - 0.05–0.10 mm (.0020–.0040 in.) <F5M22>

**Output shaft**
- Preload
  - 0.05–0.10 mm (.0020–.0040 in.) <All models>

**Differential case**
- End play
  - 0.05–0.17 mm (.0020–.0067 in.) <F5M21>
- Preload
  - 0.05–0.10 mm (.0020–.0040 in.) <F5M22>

**I** OIL SEAL FOR DRIVE SHAFT INSTALLATION
**SEALANT APPLICATION TO MACHINE SCREW**

Specified sealant:  
3M STUD Locking No.4170 or equivalent

**OIL SEAL INSTALLATION**

1. Install the oil seal flange so that the 3 mm (.12 in.) hole faces the bottom of the transaxle.

   **Caution**
   - Apply transmission oil to the oil seal lip before installing.
(3) Shift the transaxle in reverse using control lever and select lever.
(4) Tighten the lock nut to specified torque, while using the bolt attached in the above step as a spinner handle stop per.

(5) Stake the lock nut.

**SPRING PIN FOR OD-R SHIFT FORK INSTALLATION**

**SEALANT APPLICATION TO AIR BREATHER**
Specified sealant:
3M SUPER WEATHERSTRIP No.8001 or equivalent

**SEALANT APPLICATION TO REAR COVER**
Specified sealant:
Mitsubishi genuine sealant Part No.MD997740 or equivalent
WHOLE TRANAXLE CASE ADAPTER ASSEMBLY INSTALLATION

1. Apply specified sealant (liquid gasket) to the transaxle case side of the transaxle case adapter assembly.

   Specified sealant:
   Mitsubishi genuine sealant Part No. MD997740 or equivalent

   Caution
   - Squeeze out sealant from the tube uniformly without excess or discontinuity.

WX STEEL BALLS INSTALLATION

1. Move the center shaft so that the steel balls are securely seated in the grooves.

Y SNAP RING INSTALLATION

1. Choose a snap ring that gives the standard end play of the viscous coupling and install it.

   Standard value:
   Viscous coupling: 0.10 – 0.26 mm (.0039 – .0102 in.)

Z WAVE SPRING INSTALLATION

1. Install the wave spring so that the clasps come to the indicated position in the illustration.
**U** SPACERS INSTALLATION

1. Place two pieces of solder measuring about 10 mm (.39 in.) in length and 3 mm (.12 in.) in diameter at illustrated locations on the transaxle and install each outer race.

2. Place two pieces of solder measuring about 10 mm (.39 in.) in length and 3 mm (.12 in.) in diameter on the bearing outer race as shown in illustration.

3. Install the transaxle case and tighten the bolts to specified torque.

4. Remove the transaxle case and remove the solder.

5. Measure the thickness of the crushed solder with a micrometer and select and install a spacer of thickness that gives standard end play.

   **Standard value:**
   - Front output shaft bearing preload:
     0.08–0.13 mm (.0031–.0051 in.)
   - Front differential case end play:
     0.05–0.17 mm (.0020–.0067 in.)

**V** SPACERS INSTALLATION

1. Place two pieces of solder measuring about 10 mm (.39 in.) in length and 3 mm (.12 in.) in diameter at illustrated locations on the transaxle case adapter assembly and install each outer race.

2. Install the transaxle case adapter assembly and rear cover and tighten the bolts to specified torque.

3. Remove the transaxle case adapter assembly and rear cover.

4. Remove each outer race and remove the solder. Measure the thickness of the crushed solder with a micrometer and select and install a spacer of thickness that gives standard end play and preload.

   **Standard value:**
   - Intermediate gear preload:
     0.08–0.13 mm (.0031–.0051 in.)
   - Center differential case preload:
     0.08–0.13 mm (.0031–.0051 in.)
   - Input shaft end play:
     0–0.05 mm (0–.0020 in.)
REASSEMBLY SERVICE POINTS

A. SYNCHRONIZER HUB / SYNCHRONIZER SLEEVE INSTALLATION

B. SYNCHRONIZER KEY INSTALLATION

C. SYNCHRONIZER SPRING INSTALLATION

(1) When installing the synchronizer springs, be sure to position each spring with respect to the keys as illustrated.
5TH SPEED SYNCHRONIZER <5-speed Model Only>

DISASSEMBLY AND REASSEMBLY

Disassembly steps
1. Reverse brake ring (with reverse brake)
2. Stop plate (without reverse brake)
3. Synchronizer spring
4. Synchronizer sleeve
5. Synchronizer key
6. Synchronizer hub

INSPECTION

SYNCHRONIZER SLEEVE AND HUB
(1) Combine the synchronizer sleeve and hub and check that they slide smoothly.
(2) Check that the sleeve is free from damage at its inside front and rear ends.
(3) Check for wear of the hub front end (surface in contact with the 5th speed gear).

Caution
- When replacing, replace the synchronizer hub and sleeve as a set.

SYNCHRONIZER KEY AND SPRING
(1) Check for wear of the synchronizer key center protrusion.
(2) Check the spring for weakness, deformation and breakage.
Lubricate all internal parts with gear oil during reassembly.

Disassembly steps

1. Snap ring
2. Ball bearing
3. Bearing sleeve

INSPECTION

INPUT SHAFT

(1) Check the outer surface of the input shaft where the needle bearing is mounted for damage, abnormal wear and seizure [portion A].

(2) Check the splines for damage and wear.
DISASSEMBLY SERVICE POINTS

**A** FRONT BALL BEARING / FRONT TAPER ROLLER BEARING REMOVAL

**B** BEARING SLEEVE FOR 5TH SPEED GEAR REMOVAL

**C** 4TH SPEED GEAR I 3RD SPEED GEAR REMOVAL
SPEED GEARS
(1) Check the synchronizer cone for rough surface, damage and wear.
(2) Check the gear bore and front and rear ends for damage and wear.

REASSEMBLY SERVICE POINTS

A  3RD-4TH SPEED SYNCHRONIZER HUB / 3RD-4TH SPEED SYNCHRONIZER SLEEVE INSTALLATION

B  SYNCHRONIZER SPRING / SYNCHRONIZER KEY INSTALLATION
(1) When installing the synchronizer springs, be sure to position each spring with respect to the keys as illustrated.

C  BEARING SLEEVE FOR 4TH SPEED GEAR INSTALLATION

D  SUB GEAR / CONE SPRING / SNAP RING INSTALLATION
NEEDLE BEARING
(1) Combine the needle bearing with the shaft or bearing sleeve and gear and check that it rotates smoothly without abnormal noise or play.
(2) Check the needle bearing cage for deformation.

SYNCHRONIZER RING
(1) Check the clutch gear teeth for damage and breakage.
(2) Check the internal surface for damage, wear and broken threads.
(3) Force the synchronizer ring toward the clutch gear and check clearance “A”. Replace if it is out of specification.
Limit: 0.5 mm (.020 in.)

SYNCHRONIZER SLEEVE AND HUB
(1) Combine the synchronizer sleeve and hub and check that they slide smoothly.
(2) Check that the sleeve is free from damage at its inside front and rear ends.
(3) Check for wear of the hub end surfaces (in contact with each speed gear).
Caution
- When replacing, replace the synchronizer hub and sleeve as a set.

SYNCHRONIZER KEY AND SPRING
(1) Check for wear of the synchronizer key center protrusion.
(2) Check the spring for weakness, deformation and breakage.
SNAP RING INSTALLATION

(1) Select the thickest snap ring that can be fitted in the snap ring groove.

Standard value:
Input shaft rear bearing end play
0–0.09 mm (0–.0035 in.)

Caution
- Do not reuse the snap ring.
- The snap ring may be opened too wide by pliers, resulting in improper installation of the sleeve.

BEARING SLEEVE FOR 5TH SPEED GEAR INSTALLATION

Caution
- When press-fitting the sleeve to the input shaft, make sure that the sleeve flange is closely fitted to the bearing.
E - SPACER INSTALLATION

(1) Install with the side having the identification mark “1” on the 4th speed gear side. Spacers without identification mark may be installed in either direction.

F - INNER RING FOR REAR BEARING INSTALLATION

G - REAR BALL BEARING INSTALLATION
INTERMEDIATE GEAR

DISASSEMBLY AND REASSEMBLY – F4M21, F5M21

ZTFM0254
**D** TAPER ROLLER BEARING REMOVAL

Caution
- Do not reuse the bearing removed from the shaft.
- Replace the inner and outer races of the taper roller bearing as a set.

**INSPECTION**

**INTERMEDIATE GEAR**

1. Check the outer surface of the intermediate gear where the needle bearing is mounted for damage, abnormal wear and seizure [portion (A)].
2. Check the splines for damage and wear.

**NEEDLE BEARING**

1. Combine the needle bearing with the shaft or bearing sleeve and gear and check that it rotates smoothly without abnormal noise or play.
2. Check the needle bearing cage for deformation.

**SYNCHRONIZER RING**

1. Check the clutch gear teeth for damage and breakage.
2. Check the internal surface for damage, wear and broken threads.

3. Force the synchronizer ring toward the clutch gear and check clearance “A”. Replace if it is out of specification.

Limit: 0.5 mm (.020 in.)
DISASSEMBLY SERVICE POINTS

**A** BALL BEARING / TAPER ROLLER BEARING / 1ST SPEED GEAR REMOVAL

Caution
- Do not reuse the bearing removed from the shaft.

Caution
- Do not reuse the bearing removed from the shaft.
- Replace the inner and outer races of the taper roller bearing as a set.

**B** 1ST-2ND SPEED SYNCHRONIZER HUB / 2ND SPEED GEAR REMOVAL

**C** BALL BEARING REMOVAL

Caution
- Do not reuse the bearing removed from the shaft.
REASSEMBLY SERVICE POINTS

▸ A BALL BEARING INSTALLATION

▸ B TAPER ROLLER BEARING INSTALLATION
Caution
• When installing the bearing, push the inner race only.

▸ C SYNCHRONIZER RINGS FOR 1ST SPEED GEAR, 2ND SPEED GEAR INSTALLATION
(1) The 1st speed gear and 2nd speed gear of synchronizer rings have an identification mark.
SYNCHRONIZER OUTER RING, INNER RING AND CONE
(1) Check that there are no scratches of damage on the clutch gear teeth and cone surface.
(2) Check that there are no scratches, wear or peeling on the paper lining surface.

(3) Install the outer ring, inner ring and cone, and press them onto the clutch gear. Check clearance “A”, and replace if “A” is below the limit value.

Limit: 0.5 mm (.020 in.)
Caution
- Replace the outer ring, inner ring and cone as a set.

SYNCHRONIZER SLEEVE AND HUB
(1) Combine the synchronizer sleeve and hub and check that they slide smoothly.
(2) Check that the sleeve is free from damage at its inside front and rear ends.
(3) Check for wear of the hub end surface (in contact with each speed gear).

Caution
- When replacing, replace the synchronizer hub and sleeve as a set.

SYNCHRONIZER KEY AND SPRING
(1) Check for wear of the synchronizer key center protrusion.
(2) Check the spring for weakness, deformation and breakage.

SPEED GEARS
(1) Check the bevel gear and clutch gear teeth for damage and wear.
(2) Check the synchronizer cone for rough surface, damage and wear.
(3) Check the gear bore and front and rear ends for damage and wear.
**G** TAPER ROLLER BEARING INSTALLATION

Caution
- When installing the bearing, push the inner race only.

**H** BALL BEARING INSTALLATION

**I** SNAP RING INSTALLATION

(1) Select and install the snap ring that gives standard intermediate gear bearing end play.

**Standard value:**
- Intermediate gear bearing end play:
  - 0.01–0.14 mm (.0004–.0055 in.) <F4M2, F5M2, F5M3, W5M3>
  - 0.01–0.11 mm (.0004–.0044 in.) <F5M3, W5M3>
(1) Combine the 1st–2nd speed synchronizer hub and sleeve as illustrated.

(2) The synchronizer sleeve has tooth missing at six portions. Assemble the hub to the sleeve in such a way that the center tooth “T” between two missing teeth will touch the synchronizer key.

(1) When installing the synchronizer springs, be sure to position each spring with respect to the keys as illustrated.

(1) When installing the bearing sleeve, be sure to position the key and the spring stepped portion correctly.
FRONT OUTPUT SHAFT <AWD>
DISASSEMBLY AND REASSEMBLY

Disassembly steps
1. Taper roller bearing
2. Taper roller bearing
3. Front output shaft

DISASSEMBLY SERVICE POINTS

- TAPER ROLLER BEARINGS REMOVAL
  (1) Remove the taper roller bearings using the special tool.
  NOTE
  (1) Do not reuse the bearing removed from the shaft.
  (2) Replace the inner and outer races of the taper roller bearing as a set.

REASSEMBLY SERVICE POINTS

- TAPER ROLLER BEARINGS INSTALLATION
  (1) Install the taper roller bearing using the special tool.
  NOTE
  Apply the special tool to the inner race only when installing the bearing.

- TAPER ROLLER BEARINGS INSTALLATION
  (1) Install the taper roller bearing using the special tool.
  NOTE
  Apply the special tool to the inner race only when installing the bearing.

Lubricate all internal parts with gear oil during reassembly.
OUTPUT SHAFT <FWD>
DISASSEMBLY AND REASSEMBLY

Disassembly steps
1. Taper roller bearing
2. Output shaft

DISASSEMBLY SERVICE POINTS

- TAPER ROLLER BEARINGS REMOVAL

Caution
- Do not reuse the bearings removed from the shaft.
- Replace the inner and outer races of the taper roller bearing as a set.

REASSEMBLY SERVICE POINTS

- TAPER ROLLER BEARINGS INSTALLATION

Caution
- When installing the bearing, push the inner race only.
**B** TAPER ROLLER BEARING REMOVAL

Caution
- Do not reuse the bearing removed from the shaft.
- Replace the inner and outer races of the taper roller bearing as a set.

**C** LOCK PIN REMOVAL

(1) Drive out the lock pin from the hole A using a punch.

**ADJUSTMENT OF PINION BACKLASH**

Measure the backlash between the side gears and pinions. Adjust for same backlash of both side gears.

**Standard value:**

0.025–0.150 mm (0.00098–0.00591 in.)

If backlash is out of specification, disassemble again and using correct spacer, reassemble and adjust.

**REASSEMBLY SERVICE POINTS**

**A** LOCK PIN INSTALLATION

(1) Align the pinion shaft lock pin hole with the case lock pin hole and insert the lock pin.

**Caution**
- Do not reuse the lock pin.
- The lock pin must not protrude more than 3 mm (.118 in.).  <FWD>
- The lock pin head must be sunk from the flange surface of the differential case.  <AWD>

**B** TAPER ROLLER BEARINGS INSTALLATION

**Caution**
- When press-fitting the bearings, push the inner race only.
Lubricate all internal parts with gear oil during reassembly.

Lubricate all internal parts with gear oil during reassembly.
BALL BEARINGS INSTALLATION

(1) Apply the specified sealant to the bolt threads.
   Specified sealant:
   3M Stud Locking No.4170 or equivalent

(2) Tighten to the specified torque while following the order given in the illustration.

BOLTS INSTALLATION

(1) Apply the specified sealant to the bolt threads.
   Specified sealant:
   3M Stud Locking No.4170 or equivalent
DISASSEMBLY SERVICE POINTS

▲A TAPER ROLLER BEARINGS REMOVAL

(1) Remove the taper roller bearings using the special tool.

NOTE
(1) Do not reuse the bearing removed from the shaft.
(2) Replace the inner and outer races of the taper roller bearing as a set.

REASSEMBLY SERVICE POINTS

▲A SPACERS INSTALLATION

(1) Install the spacer, side gear, pinion gear, washer and pinion shaft to the center differential case.
(2) Holding down the pinion shaft, select the spacer of maximum thickness that allows the pinion gear to turn lightly and install it to the shaft.
(3) Install the side gear, spacer and output gear and tighten the bolt to specified torque.
(4) Select the spacer of maximum thickness that allows the side gear to turn lightly and install it.
(5) Check that both side gears turn lightly.

Standard value:
Center differential side gear end play:
0.05–0.25 mm (.0020–.0010 in.)
Disassembly steps:

1. Taper roller bearing
2. Bolt
3. Taper roller bearing
4. Output gear
5. Spacer
6. Side gear
7. Pinion shaft
8. Washer
9. Pinion
10. Side gear

8. Reverse shift lug

DISASSEMBLY AND REASSEMBLY - F5M21, F5M22

Lubricate all internal parts with gear oil during reassembly.

Disassembly steps
1. 1st-2nd speed shift fork
2. 1st-2nd speed shift rail
3. 3rd-4th speed shift fork
4. 5th-reverse speed shift rail
5. Interlock plunger
6. 3rd-4th speed shift rail
7. Reverse shift lug
**BOLT INSTALLATION**

1. Apply the specified sealant to the bolt threads
   - Specified sealant: 3M Stud Locking No.4170 or equivalent

2. Tighten to the specified torque while following the order given in the illustration.

**TAPER ROLLER BEARINGS INSTALLATION**

NOTE
Apply the special tool to the inner race only when installing the bearing.
SPEEDOMETER GEAR
DISASSEMBLY AND REASSEMBLY

Disassembly steps
1. O-ring
2. Spring pin
3. Speedometer driven gear

REASSEMBLY SERVICE POINTS

A. SPEEDOMETER DRIVEN GEAR INSTALLATION
   (1) Apply gear oil sparingly to the speedometer driven gear shaft and insert the shaft.

B. SPRING PIN INSTALLATION
   (1) Install the spring pin in such a way that its slit does not face the gear shaft.

C. OIL SEAL INSTALLATION
   (1) Press into the position and direction indicated in the illustration.

Lubricate all internal parts with gear oil during reassembly.
Lubricate all internal parts with gear oil during reassembly.

Disassembly steps
1. 3rd-4th speed shift fork
2. 1st-2nd speed shift fork
3. 3rd-4th speed shift rail
4. 5th-reverse speed shift rail
5. Interlock plunger
6. 3rd-4th speed shift rail
7. Reverse shift lug

REASSEMBLY SERVICE POINTS

TA INTERLOCK PLUNGER INSTALLATION
DISASSEMBLY AND REASSEMBLY <F5M22–2–PQKE and XPXL>

Lubricate all internal parts with gear oil during reassembly.

Disassembly steps
1. O-ring
2. Speedometer driven gear
3. Oil seal
4. Sleeve

REASSEMBLY SERVICE POINTS

A Oil seal installation
(1) Press into the position and direction indicated in the illustration.

B Speedometer driven gear installation
(1) Apply gear oil sparingly to the speedometer driven gear shaft and insert the shaft.
DISASSEMBLY AND REASSEMBLY <F5M31–2–VPXF and VPZF>

Disassembly steps
1. O-ring
2. Speedometer driven gear
3. Oil seal
4. Sleeve

REASSEMBLY SERVICE POINTS

A OIL SEAL INSTALLATION
(1) Press into the position and direction indicated in the illustration.

B SPEEDOMETER DRIVEN GEAR INSTALLATION
(1) Apply gear oil sparingly to the speedometer driven gear shaft and insert the shaft.

Lubricate all internal parts with gear oil during reassembly.
DISASSEMBLY AND REASSEMBLY <F5M33-2-SUQR>

Disassembly steps
1. e-clip
2. Speedometer driven gear
3. O-ring
4. Sleeve

REASSEMBLY SERVICE POINT

SPEEDOMETER DRIVEN GEAR INSTALLATION
Apply gear oil sparingly to the speedometer driven gear shaft and insert the shaft.
DISASSEMBLY AND REASSEMBLY
<F5M31–2–VVXF and VVZF, F5M33–2–SPZT, W5M33–2–NPZT>

Lubricate all internal parts with gear oil during reassembly.

Disassembly steps
1. e-clip
2. Speedometer driven gear
3. O-ring
4. Sleeve

REASSEMBLY SERVICE POINT

SPEEDOMETER DRIVEN GEAR INSTALLATION
Apply gear oil sparingly to the speedometer driven gear shaft and insert the shaft.
DISASSEMBLY SERVICE POINTS

A. LOCK PIN REMOVAL

Caution
- When removing the lock pin, turn the control lever to such position that the lock pin will not contact the clutch housing.

B. SPRING PIN REMOVAL

Caution
- When removing the spring pin, pull the control shaft in the direction illustrated so that the spring pin will not contact the clutch housing.

C. NEEDLE BEARING REMOVAL

REASSEMBLY SERVICE POINTS

A. NEEDLE BEARINGS INSTALLATION

(1) Install the needle bearing flush with the surface A of the clutch housing using a socket wrench.

(2) Install with the part type stamped side facing the surface A.
CLUTCH HOUSING
DISASSEMBLY AND REASSEMBLY

Disassembly steps
1. Bolt
2. Select lever assembly
3. Select lever shoe
4. Interlock plate bolt
5. Gasket
6. Lock pin
7. Spring pin
8. Neutral return spring
9. Stopper body
10. Control finger
11. Interlock plate
12. Neutral return spring assembly
13. Control shaft
14. Control shaft boot
15. Oil seal
16. Needle bearing
17. Needle bearing
18. Clutch housing
19. Pin
20. Return spring
21. Stopper plate
22. Spring pin

Lubricate all internal parts with gear oil during reassembly.

TSB Revision
TRANSFER <AWD>

DISASSEMBLY AND REASSEMBLY

Disassembly steps
1. Cover
2. Cover gasket
3. Extension housing assembly
4. Transfer case sub assembly
5. Spacer
6. O-ring
7. Transfer case adapter sub assembly

Lubricate all internal parts with gear oil during reassembly.
**B** OIL SEAL INSTALLATION

**C** SPRING PIN / LOCK PIN INSTALLATION

*Caution*
- Do not reuse the spring pin and lock pin.
- Install the spring pin in such a way its slit will be at right angle to the control shaft center.
(7) Turn the drive bevel gear shaft (one forward turn, one reverse turn) using the special tool.

**NOTE**
Do not turn the drive bevel gear shaft more than one turn in either direction as this will cause an unclear tooth contact pattern.

(8) Check to see if the drive bevel gear tooth contact is normal.

**NOTE**
Refer to the TOOTH CONTACT ADJUSTMENT PROCEDURES on next page (below) for the standard tooth contact.

(9) Check to see if the drive bevel gear and driven bevel backlash is as specified.

**Standard value:** Bevel gear set backlash
0.08–0.13 mm (.0031–.0051 in.)

### A ▶️ O-RING INSTALLATION

**Caution**
Apply transmission oil to the O-ring before installation.

### B ▶️ EXTENSION HOUSING INSTALLATION

(1) Apply sealant to the adapter flange surface and install the extension housing.

**Specified sealant:**
- Mitsubishi genuine Sealant Part No. MD997740 or equivalent

**NOTE**
Squeeze out sealant from the tube uniformly and continuously in adequate amount.
REASSEMBLY SERVICE POINTS
BACKLASH ADJUSTMENT

(1) Apply a light and uniform coat of machine blue or red lead to the driven bevel gear teeth (both sides) using a brush.

(2) Install the spacer that has been used.

(3) Align the transfer case and drive bevel gear mating marks.

(4) Align the transfer case adapter and drive bevel gear mating marks.

(5) Assemble the transfer case and transfer case adapter and tighten to the specified torque.

(6) With the mating marks aligned as in step (3), confirm that the transfer case and drive bevel gear mating marks are matched looking from the cover.
Remedy
Use thinner driven bevel gear mount adjusting spacer to bring the driven bevel gear more closer to the drive bevel gear.

NOTE
(1) If correct tooth contact cannot be obtained even by change of the driven bevel gear mount adjusting spacer, increase or decrease or decrease the drive bevel gear preload adjusting spacer and the drive bevel gear mount adjusting spacer as described below and then adjust tooth contact again.

- When the driven bevel gear height is too small even if the thinnest driven bevel gear mount adjusting spacer 0.13 mm (.0051 in.) is used:
  Replace the drive bevel gear mount adjusting spacer that is in use with one that is one rank thicker and replace the drive bevel preload adjusting spacer that is in use with one that is one rank thinner.

- When the driven bevel gear height is too large even if the thickest driven bevel gear mount adjusting spacer 0.52 mm (.025 in.) is used:
  Replace the drive bevel gear mount adjusting spacer that is in use with one that is one rank thinner and replace the drive bevel gear preload adjusting spacer that is in use with one that is one rank thicker.

(2) Repeat above steps until the tooth contact pattern equal or close to the standard pattern is obtained.

(3) If the tooth contact pattern cannot be adjusted close to the standard pattern by above adjustment, replace the drive bevel gear and driven bevel gear as a set and readjust the tooth contact.
TOOTH CONTACT ADJUSTING PROCEDURES

1. Standard tooth contact pattern
   A.. Small end side
   B Drive side tooth face  
      (Side on which force acts when running forward)
   C.. Big end side
   D.. Coast side tooth face  
      (Side on which force acts when reversing)

2. Tooth contact pattern produced when drive bevel gear height is too large
   Cause
   The driven bevel is too close to the drive bevel gear.
   Remedy
   Use thicker bevel gear mount adjusting spacer to separate the driven bevel gear more from the drive bevel gear.

3. Tooth contact pattern produced when driven bevel gear height is too small
   Cause
   The driven bevel gear is too separated from the drive bevel gear.
TRANSFER CASE <AWD>

DISASSEMBLY AND REASSEMBLY

Disassembly steps
1. Transfer cover
2. O-ring
3. Spacer
4. Outer race
5. Drive bevel gear assembly
6. Outer race
7. Spacer
8. Oil seal
9. Transfer case

Lubricate all internal parts with gear oil during reassembly.
EXTENSION HOUSING <AWD>

DISASSEMBLY AND REASSEMBLY

Disassembly steps
► B ◄ 1. Air bleeder
   2. Dust seal guard
► A ◄ 3. Oil seal
   4. Extension housing

REASSEMBLY SERVICE POINTS
► A ◄ OIL SEAL INSTALLATION

► B ◄ AIR BLEEDER INSTALLATION
(1) Install the air bleeder applying sealant to the inserting portion.
   Specified sealant: 3M SUPER WEATHERSTRIP No.8001 or equivalent
Disassembly steps

1. Lock nut
2. Driven bevel gear assembly
3. Taper roller bearing
4. Spacer
5. Collar
6. Outer race
7. Outer race
8. Transfer case assembly

Lubricate all internal parts with gear oil during reassembly.
REASSEMBLY SERVICE POINTS

A OIL SEAL INSTALLATION

B SPACER SELECTION

1. Use the existing spacer to assemble the transfer case.
2. Using the special tool, check that the bevel gear rotating drive torque is within standard range.

   Standard value: 1.7 - 2.5 Nm (1.23 - 1.81 ft.lbs.)

3. If the rotating drive torque is outside of the standard range, adjust using adjusting spacers.

   NOTE
   For adjustment, use two spacers of which thickness is as close as possible to each other.

C O-RING INSTALLATION

Caution
Apply transmission oil to the O-ring before installation.
(2) Lock the lock nut at two positions.
DISASSEMBLY SERVICE POINTS

A. LOCK NUT REMOVAL

(1) Unlock the lock nut. (Straighten the bent nut.)

(2) Holding the driven bevel gear in a vice and using the special tool, remove the lock nut.

REASSEMBLY SERVICE POINTS

A. SPACER SELECTION

(1) Use the existing spacer to assemble the transfer case adapter.

(2) Using the special tool, check that the bevel gear rotating drive torque is within standard range.

Standard value: 1.0–1.7 Nm (0.72–1.23 ft.lbs.)

(3) If the rotating drive torque is outside of the standard range, adjust using adjusting spacers.

B. TAPER ROLLER BEARING INSTALLATION

C. LOCK NUT INSTALLATION

(1) Holding the driven bevel gear in a vice and using the special tool, tighten the lock nut to specified torque.
REASSEMBLY SERVICE POINTS

▲ATRANSFER DRIVE BEVEL GEAR INSTALLATION
(1) Install the drive bevel gear and drive bevel gear shaft with the mating marks aligned.

▲BTAPER ROLLER BEARING INSTALLATION

Disassembly steps

14. Under cover
15. Under cover gasket
16. Snap ring
17. Mainshaft rear bearing
18. Poppet plug
19. Poppet spring
20. Steel ball
21. Spring pin for 3rd-4th speed shift fork
22. Spring pin for 1st-2nd speed shift fork
23. Spring pin for OD-R shift fork
24. OD-R shift rail
25. 3rd-4th speed shift rail
26. OD-R shift fork
27. Interlock plunger
28. Countershaft lock nut
29. Countershaft rear bearing
30. Counder overdrive gear
31. 1st-2nd speed shift rail

Lubricate all internal parts with gear oil during reassembly.
Lubricate all internal parts with gear oil during reassembly.

Disassembly steps:
1. Sleeve clamp
2. Speedometer gear
3. Backup light switch
4. Gasket
5. Steel ball
6. Resistance spring
7. Steel ball
8. Seal plug
9. Spring
10. Neutral return plunger (A)
11. Neutral return plunger (B)
12. Extension housing
13. Extension housing gasket
Disassembly steps

60. Spacer
61. Countershaft center bearing outer race
62. Mainshaft center bearing
63. Front bearing retainer
64. Front bearing retainer gasket
65. Oil seal
66. Countershaft front bearing outer race
67. Spacer
68. Snap ring
69. Snap ring
70. Maindrive gear bearing
71. Maindrive gear
72. 3rd-4th speed shift fork
73. 1st-2nd speed shift fork
74. Countershaft assembly
75. Mainshaft front bearing
76. Mainshaft assembly
77. Transmission case

Lubricate all internal parts with gear oil during reassembly.
Disassembly steps

1. Mainshaft lock nut
2. Spacer
3. Counter reverse gear
4. Spacer
5. Spacer
6. Steel ball
7. Overdrive gear
8. Needle bearing

9. Bearing sleeve
10. Bearing spacer
11. Overdrive synchronizer ring
12. OD-R synchronizer sleeve
13. OD-R synchronizer spring
14. OD-R synchronizer hub

15. OD-R synchronizer key
16. Reverse gear
17. Needle bearing
18. Bearing sleeve
19. Spacer
20. Cotter pin
21. Slotted nut
22. Thrust washer
23. Reverse idler gear
24. Needle bearing
25. Bolt
26. OD-R synchronizer key
27. OD-R synchronizer sleeve
28. OD-R synchronizer spring
29. OD-R synchronizer hub

Lubricate all internal parts with gear oil during reassembly.
**REASSEMBLY SERVICE POINTS**

▶ **A** MAINDRIVE GEAR BEARING INSTALLATION

▶ **B** SNAP RING INSTALLATION

(1) Select and install snap ring to that maindrive gear bearing end play may reach standard valve.

Standard value: 0 – 0.06 mm (0 – .0024 in.)

▶ **C** SPACER INSTALLATION

(1) Place two pieces of solder measuring about 10 mm (.39 in.) in length and 1.6 mm (.063 in.) in diameter on the bearing outer race as shown in illustration.

(2) Install the front bearing retainer and tighten the nuts to specified torque.

(3) Remove the front bearing retainer and remove the solder.

(4) If the solders are not compressed, use larger diameter solder to perform step (1) to (3).

(5) Measure the thickness of the crushed solder with a micrometer and select and install a spacer of thickness that gives standard end play.

Standard value: 0 – 0.1 mm (0 – .004 in.)

▶ **D** OIL SEAL INSTALLATION

(1) Apply transmission oil to the lip on the oil seal.

(2) Using special tool, install oil seal.
DISASSEMBLY SERVICE POINTS

(A) EXTENSION HOUSING REMOVAL
(1) Pull the extension housing toward the rear while pushing the change shifter toward the left.

(B) MAINSHAFT LOCK NUT REMOVAL

(C) BEARING SLEEVE REMOVAL

(D) MAINSHAFT CENTER BEARING REMOVAL

(E) MAINDRIVE GEAR BEARING REMOVAL
22C-16

R5M21—Transmission

(2) Apply a coating of adhesive to the threaded part of the bolt.

Specified adhesive

3M STUD Locking Part No.4170 or equivalent

◆ H ◆ OD-R SYNCHRONIZER HUB/OD-R SYNCHRONIZER SLEEVE INSTALLATION

◆ I ◆ OD-R SYNCHRONIZER KEY/OD-R SYNCHRONIZER SPRING INSTALLATION

(1) Install two synchronizer springs. When installing springs, make sure that steps of front and rear springs are positioned on synchronizer key, but not on the same key.

◆ J ◆ OVERDRIVE SYNCHRONIZER RING INSTALLATION

(1) Engage synchronizer ring to OD gear as shown in illustration before installing OD gear and ensure that there is certain clearance “A”. If dimension “A” exceeds the limit, replace the ring and/or gear.

Limit: 0.5 mm (.020 in.)

◆ K ◆ BEARING SLEEVE INSTALLATION

TSB Revision
(3) Apply specified grease to the lip of the front bearing retainer oil seal.

Specified grease:
Mitsubishi genuine grease Part No.0101011 or equivalent

**E** MAINSHAFT CENTER BEARING INSTALLATION

**F** SPACER INSTALLATION

(1) Press-fit the outer race and counter gear securely.

(2) Assemble the select spacers and align them with a straight edge.

(3) Select a spacer which will achieve the standard value.

**G** REVERSE IDLER GEAR SHAFT INSTALLATION

(1) Place an M8×50 mm (1.97 in.) bolt in the guide and install the reverse idler gear shaft.
(2) Stake the area as shown in illustration without fail to prevent lock nut from loosening.
(3) Ensure that the OD gear rotates smoothly.

**P** POPPET SPRING INSTALLATION
(i) Insert poppet spring with small end on ball side. Three springs are identical to one another.

**Q** EXTENSION HOUSING INSTALLATION
(1) Install the extension housing while pushing the change shifter in the direction of the arrow and fit the control finger into the groove in the selector.

**R** NEUTRAL RETURN PLUNGER (B) / NEUTRAL RETURN PLUNGER (A) / SPRING / SEAL PLUG / STEEL BALL / RESISTANCE SPRING INSTALLATION

**S** SPEEDOMETER GEAR INSTALLATION
(1) Match the mating marks to the number of teeth on the speedometer driven gear and install the speedometer gear.
**L** MAINSHAFT LOCK NUT INSTALLATION

1. Using the special tool, tighten the mainshaft lock nut.

2. Stake the area as shown in illustration of lock nut

3. Ensure that the OD gear rotates smoothly.

**M** COUNTER OVERDRIVE GEAR/1ST-2ND SPEED SHIFT RAIL INSTALLATION

1. Install the counter overdrive gear and 1st-2nd speed shift rail at the same time.

**N** COUNTERSHAFT REAR BEARING INSTALLATION

**Q** COUNTERSHAFT LOCK NUT INSTALLATION

1. Tighten the countershaft lock nut to specified torque.
Disassembly steps

1. Ball bearing inner race
2. 1st speed gear
3. Needle bearing
4. Searing sleeve
5. 1st-2nd speed synchronizer sleeve
6. Synchronizer ring
7. 1st-2nd speed synchronizer spring
8. 1st-2nd speed synchronizer key
9. 1st-2nd speed synchronizer hub
10. 2nd speed gear
11. Needle bearing
12. Sealed bearing ring
13. 3rd-4th speed synchronizer spring
14. 3rd-4th speed synchronizer key
15. 3rd-4th speed synchronizer hub
16. Synchronizer ring
17. 3rd-4th speed synchronizer sleeve
18. Needle bearing
19. 3rd speed gear
20. Mainshaft

Lubricate all internal parts with gear oil during reassembly.
SPRING PIN INSTALLATION
1ST-2ND SPEED SYNCHRONIZER KEY I
1ST-2ND SPEED SYNCHRONIZER SPRING INSTALLATION

(1) Assemble the 1st-2nd speed synchronizer by the same procedure as for the 3rd-4th speed synchronizer in the previous item.

BALL BEARING INNER RACE INSTALLATION
**INSPECTION**
- Check the synchronizer ring for worn and damaged internal threads.
- With synchronizer assembled to cone of each gear, check dimension “A”. If dimension “A” exceeds the limit, replace the synchronizer ring and/or gear.
  
  **Limit: 0.5 mm (0.020 in.)**

**REASSEMBLY SERVICE POINTS**

**A**

**3RD-4TH SPEED SYNCHRONIZER SLEEVE / 3RD-4TH SPEED SYNCHRONIZER HUB INSTALLATION**

(1) Mate synchronizer hub with sleeve using mark made at disassembly. Make sure that hub and sleeve slide smoothly. If they slide unsmoothly, replace hub and sleeve assembly.

(2) 3rd-4th speed synchronizer sleeve has teeth missing at six portions. Assemble hub to sleeve in such a way that center tooth “T” between two missing teeth will touch synchronizer key.

(3) Use care when installing 3-4 synchronizer hub since only 3rd-4th speed synchronizer is directional. Smaller diameter side “A” of center boss is front of 3-4 synchronizer hub.

**B**

**3RD-4TH SPEED SYNCHRONIZER KEY INSTALLATION**

(1) Insert three keys into groove of synchronizer hub.

(2) Install two synchronizer springs to synchronizer. When synchronizer springs are installed, make sure that front and rear ones are not faced in same direction.

**C**

**SNAP RING INSTALLATION**

(1) Select proper snap ring and install so that the clearance between 3rd-4th speed synchronizer hub and snap ring become standard value.

  **Standard value: 0–0.08 mm (0–0.0031 in.)**
SPEEDOMETER GEAR
DISASSEMBLY AND REASSEMBLY

Disassembly steps

1. Spring pin
2. Driven gear
3. Sleeve
4. O-ring
5. O-ring

REASSEMBLY SERVICE POINT

SPRING PIN INSTALLATION

(1) Drive the spring pin in, while making sure that slit does not face gear shaft.
EXTENSION HOUSING
DISASSEMBLY AND REASSEMBLY

Disassembly steps
1. Lock pin
2. Spring pin
3. Control flange and control shaft
4. Neutral return finger
5. Change shifter
6. Dust seal guard
7. Oil seal
8. Extension housing

REASSEMBLY SERVICE POINTS

A Oil Seal Installation
(1) Apply transmission oil to lip of oil seal.
(2) Install oil seal with lip toward front of housing.

B Spring Pin Installation
CONTROL LEVER
DISASSEMBLY AND REASSEMBLY

Disassembly steps
1. Bolt
2. Control lever
3. Lever bushing
4. Gasket
5. Stopper plate
6. Nut
7. Stopper bracket assembly
8. Special bolt
9. Extension housing cover
10. Return spring

- Check for play between control lever and control lever. If play is evident, replace lever assembly.
- Push control lever in and check to ensure that it moves smoothly up and down.
- Check cover for damage and replace if necessary. To remove cover, cut away with knife. To install new cover, first apply thin coat of oil to periphery of control lever.
- Then install by sliding it down from top of lever. Check lever bushing for wear and replace if necessary.

Sealant:
(A) 3M ATD Part No.8660 or equivalent
(B) 3M ATD Part No.2353 or equivalent

Sealant:
Mitsubishi genuine sealant
Part No.997740 or equivalent

Lubricate all internal parts with gear oil during reassembly.
COUNTERSHAFT

DISASSEMBLY AND REASSEMBLY

Disassembly steps
1. Countershaft front bearing
2. Countershaft rear bearing
3. Countershaft gear

DISASSEMBLY SERVICE POINTS

A. LOCKING NUT REMOVAL

B. REVERSE SHAFT REMOVAL

C. COUNTERSHAFT BALL BEARINGS REMOVAL

D. MAINSHAFT BALL BEARING / DRIVE PINION BALL BEARING REMOVAL

E. MAINSHAFT ASSEMBLY / DRIVE PINION REMOVAL

1. Pull out the drive pinion to the front of the case. The gear diameter is larger than the case hole diameter so that the drive pinion cannot be removed at this point.
2. Remove the mainshaft assembly from the case.
3. Remove the drive pinion.
Disassembly steps

36. Needle Side washer bearing
34. O-ring
33. Reverse shaft
32. Lock piece
31. Locking nut

Lubricate all internal parts with gear oil during reassembly.
[C] DRIVE PINION / PILOT BEARING / MAINSHAFT ASSEMBLY INSTALLATION

(1) Install the drive pinion to the transmission case, working from case inside and let it protrude from the case.
(2) Fit the snap ring in the ball bearing outer race groove.
(3) Insert the pilot bearing into the drive pinion rear hole.
(4) Install the mainshaft assembly to the case, working from case inside and insert its front end into the pilot bearing.
(5) Push in the drive pinion until the snap ring over the bearing comes into contact with the case front. When doing so, hold the mainshaft. If the front end of the mainshaft is disengaged from the pilot bearing, it can cause damage to the bearing.

[D] BALL BEARING INSTALLATION

[E] BALL BEARING INSTALLATION

(F) BALL BEARING INSTALLATION
**COUNTERSHAFT REMOVAL**

1. Move the snap ring from its groove toward the countershaft reverse gear.
2. Move the overdrive gear as well toward the countershaft reverse gear.
3. Raise the countershaft a little and then lift it further up at its front end to remove from the transmission case.

**REASSEMBLY SERVICE POINTS**

**A** COUNTERSHAFT INSTALLATION

1. Move the snap ring and overdrive gear toward the countershaft reverse gear.
2. Install the countershaft in the transmission case.
3. Move the overdrive gear rearward.
4. Put the snap ring in its groove.

**B** BALL BEARING INSTALLATION
**K ★ CLUTCH HOUSING INSTALLATION**

1. Apply specified sealant to the clutch housing on its surface that contacts the transmission case.
   - Specified sealant: Mitsubishi genuine sealant Part No. MD997740 or equivalent

2. Wind vinyl tape around the splined portion of the drive pinion to protect the oil seal against damage.

3. Install the clutch housing to the transmission case and tighten bolts to specified torque.

4. Remove the vinyl tape.

**L ★ NEUTRAL RETURN PLUNGER (A) / NEUTRAL RETURN PLUNGER (B) INSTALLATION**

Apply grease to the neutral return plungers (A) and (B) in the places shown in the illustration.

- Specified grease: Multipurpose grease SAE J310, NLGI No. 2

**M ★ TRANSFER CASE ADAPTER / SHIFT JAWS INSTALLATION**

1. Apply specified sealant to the adapter on its surface that contacts the transmission case.
   - Specified sealant: Mitsubishi genuine sealant Part No. MD997740 or equivalent

2. Insert the shift rails into the shift rail holes of the transfer case adapter and install the adapter part way. If it is installed to the case completely, the shift jaws cannot be installed.

   **NOTE**
   When replacing the shift rails or the shift jaws, replace the shift rails and the shift jaws as a unit.

3. Pre-coated bolts are used for the attaching bolts, so when reusing the bolts, apply sealant on the threads.

   - Specified sealant: 3M STUD Locking No. 4170 or equivalent

4. Screw in adapter attaching bolts two pitches each.

5. Install the three shift jaws to respective shift rails.

6. Push the adapter into close contact with the case and tighten the six bolts to specified torque.
SUB GEAR INSTALLATION

1. Install the spring so that the long end is directed toward the gear, and combine the sub gear and spacer into an assembly using the snap rings.
2. Turn the sub gear to align all of the through holes.
3. Secure the through holes with a screwdriver, etc., and install the sub gear to the transmission case.

SIDE WASHERS INSTALLATION

LOCKING NUT INSTALLATION

1. Side the 1st-2nd gear synchronizer sleeve to the first speed side and the OD-R gear synchronizer sleeve to the reverse side for double meshing. This prevents the mainshaft from turning.
2. Using the special tool, tighten the lock nut to specified torque.
3. Punch the lock nut into two grooves on the mainshaft.

OIL SEAL INSTALLATION

1. Using the special tool, drive the oil seal into the clutch housing.
2. Apply specified grease to the oil seal lip.
   Specified grease: Multipurpose grease SAEJ310, NLGI No.2
MAINSHAFT

DISASSEMBLY AND REASSEMBLY (V5MT1-2)

Disassembly steps

1. Thrust washer No.3
2. Overdrive gear
3. Needle bearing
4. Synchronizer ring
5. Snap ring
6. Synchronizer sleeve
7. Synchronizer key

27. Synchronizer ring
28. Synchronizer sleeve
29. Synchronizer key
30. Synchronizer spring
31. Synchronizer hub
32. First gear
33. Needle bearing
34. Mainshaft

Lubricate all internal parts with gear oil during reassembly.
AIR BREATHER INSTALLATION
(1) Apply specified sealant to the press-fit portion of the air breather.

Specified sealant:
Mitsubishi genuine sealant Part No.MD997740 or equivalent

(2) Install the air breather with a mark toward rear.

SPRING PIN INSTALLATION
(1) Drive the spring pin in using the pin punch.

Caution
Do not reuse spring pin.

(2) Drive the spring pin in with the slit in the spring pin parallel to the shaft center of the shift rail, so that the dimensions are as shown in the illustration.

REVERSE GEAR INSTALLATION
Confirm the direction of reverse gear installation by observing the shape of portion (A) in the illustration.

SPRING PIN INSTALLATION
DISASSEMBLY AND REASSEMBLY (V5MT1-6)

Disassembly steps

1. Thrust washer No.3
2. Overdrive gear
3. Needle bearing
4. Synchronizer ring
5. Snap ring
6. Synchronizer sleeve
7. Synchronizer key
8. Synchronizer spring

29. Snap ring
30. Inner synchronizer ring
31. Synchronizer cone
32. Outer synchronizer ring
33. Synchronizer sleeve
34. Synchronizer key
35. Synchronizer spring
36. Synchronizer hub
37. First gear
38. Needle bearing
39. Mainshaft

Lubricate all internal parts with gear oil during reassembly.
Disassembly and Reassembly (V5MT1-3)

Disassembly steps

1. Thrust washer No.3
2. Overdrive gear
3. Needle bearing
4. Synchronizer ring
5. Snap ring
6. Synchronizer sleeve
7. Synchronizer key
8. Synchronizer spring
9. Synchronizer hub
10. Reverse gear
11. Needle bearing
12. Synchronizer ring
13. Snap ring
14. Synchronizer sleeve
15. Synchronizer key
16. Synchronizer spring
17. Synchronizer hub
18. Third gear
19. Needle bearing
20. Thrust washer No.1
21. Steel ball
22. Snap ring
23. Thrust washer No.2
24. Second gear
25. Needle bearing
26. Snap ring
27. Inner synchronizer ring
28. Synchronizer cone
29. Outer synchronizer ring
30. Synchronizer sleeve
31. Synchronizer key
32. Synchronizer spring
33. Synchronizer hub
34. First gear
35. Needle bearing
36. Mainshaft

Lubricate all internal parts with gear oil during reassembly.
(2) Install the synchronizer sleeve with its low tooth portions at synchronizer key positions.

**C. THRUST WASHERS INSTALLATION**

Install the thrust washers with oil grooved side toward the gear.

**D. SYNCHRONIZER HUB FOR THIRD AND FOURTH SPEED INSTALLATION**

Confirm the direction of hub installation by noting the diameters d and D in the illustration.

**NOTE**
The hub for the 1st-2nd synchronizer and the 5th-R synchronizer may be installed in either direction.

**E. SYNCHRONIZER RING IDENTIFICATION**
The synchronizer rings differ in groove width “W” shown in the illustration, for each of identification.

<table>

DISASSEMBLY SERVICE POINT

SYNCHRONIZER HUB REMOVAL

INSPECTION

SYNCHRONIZER RING

V5MT1-2

Combine the synchronizer ring with each speed gear and measure dimension A shown in the figure. If dimension A is smaller than the limit, replace the ring or the gear or both.

Limit: 0.2 mm (.008 in.)

Caution

When the paper lining synchronizer ring is washed, manual transmission oil must be used.

V5MT1-3, V5MT1-6

Install the inner and outer synchronizer rings and the cone to the gear, and measure dimension B shown in the illustration. If dimension B is smaller than the limit, replace the parts as a unit.

Limit: 0.3 mm (.012 in.)

REASSEMBLY SERVICE POINTS

SYNCHRONIZER SPRINGS INSTALLATION

(1) Note that the 1st-2nd synchronizer spring differs in shape from other synchronizer springs.

(2) Install the synchronizer spring in such a way that it will rest on the three synchronizer keys.

(3) When installing the synchronizer springs, make sure that the front and rear one are not faced in same direction.

SYNCHRONIZER SLEEVES INSTALLATION

(1) The sections using the synchronizer sleeves are confirmed with the identification groove.

<table>

COUNTERSHAFT

DISASSEMBLY AND REASSEMBLY

Disassembly steps
1. Overdrive gear
2. Snap ring
3. Countershaft gear

REASSEMBLY SERVICE POINT

**SNAP RING INSTALLATION**

Do not fit the snap ring in its groove. Fit it on the bearing, beforehand, between the countershaft reverse gear and the spline.

**NOTE**
Install the countershaft in the transmission case before putting the snap ring in its groove.

Lubricate all internal parts with gear oil during reassembly.
**D. POPPET SPRINGS INSTALLATION**

1. The sections using the poppet springs can be determined with the identification colors. The length and spring constants of the poppet springs differ according to the usage sections, so take care not to mistaken them when installing.

2. When using tapered poppet springs, install so that the thin edge faces the steel ball side.

**E. SCREW PLUGS INSTALLATION**

Apply specified sealant to the screw plug.

Specified sealant:
- 3M STUD Locking No. 4170 or equivalent

TSB Revision
**REASSEMBLY SERVICE POINTS**

**A - TEFLO N BUSHING INSTALLATION**

1. Before reassembly, check the Teflon bushing in the shift rail.
2. Replace the Teflon bushing if it is damaged or cracked.
   Teflon bushing can be pushed into position by a finger.
   Install the bushings at illustrated positions. Do not remove the bushing except when it is defective.

**B - STEEL BALLS INSTALLATION**

1. Install the interlock steel balls, two at a time, in holes between the shift rails.
2. Make sure that the interlock pin installed in the 3-4 shift rail moves smoothly.

**C - SPRING PINS INSTALLATION**
Disassembly steps

24. Snap ring
25. Chain cover
26. Chain cover gasket
27. Oil guide
28. Side cover
29. Side cover gasket

40. Differential lock hub
41. Oil dum cover
42. Bearing retainer
43. Side cover
44. Side cover gasket
45. Lock plate
46. Transfer counter gear shaft
47. O-ring
48. Transfer counter gear
49. Thrust washer
50. Needle bearing
51. Bearing spacer

NOTE
*: One needle bearing disused. (Up to November 1992)

Lubricate all internal parts with gear oil during reassembly.

ZTRA0271
2-4 SYNCHRONIZER ASSEMBLY I CHAIN I FRONT OUTPUT SHAFT ASSEMBLY REMOVAL

Remove the 2-4 synchronizer assembly, chain and front output shaft from the transmission as a unit.

INSPECTION
DETECTION SWITCH INSPECTION
Inspect the continuity between the connector terminal and the switch body.

<table>
<thead>
<tr>
<th>Switch condition</th>
<th>Continuity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Switch end pressed</td>
<td>No continuity</td>
</tr>
<tr>
<td>Switch end released</td>
<td>Continuity</td>
</tr>
</tbody>
</table>

REASSEMBLY SERVICE POINTS

A. OIL SEAL (FRONT OUTPUT SHAFT) INSTALLATION
Apply transmission oil to the lip of the oil seal and pressure insert it.

B. OIL SEAL (INPUT GEAR) INSTALLATION
Apply transmission oil to the lip of the oil seal and pressure insert it.

C. OIL SEAL INSTALLATION
Use a socket wrench or similar tool to install the oil seal.
DISASSEMBLY SERVICE POINTS

A H-L SHIFT RAIL REMOVAL
(1) Shift the 2-4WD shift rail to the 4WD position.

NOTE
If the 2-4WD shift rail is left in the 2WD position, the interlock is actuated, preventing removal of the H-L shift rail.

(2) Remove the H-L shift rail.

B H-L SHIFT RAIL / CHAIN COVER REMOVAL
(1) Use a poppet spring to fix the H-L shift rail at the High side.

(2) Shift the 2-4WD shift rail to the 4WD position.

NOTE
If the 2-4WD shift rail is left in the 2WD position, the interlock will actuate, preventing removal of the chain cover.

(3) Remove the chain cover, and then remove the H-L shift rail.

C REAR OUTPUT SHAFT ASSEMBLY / CHAIN / FRONT OUTPUT SHAFT ASSEMBLY REMOVAL
Remove the front output shaft, rear output shaft and chain together.

D COUNTER GEAR SHAFT REMOVAL
The counter gear shaft should be pulled out forward the transmission case side.

E SPRING PIN REMOVAL
Use a pin punch or similar tool to tap out the spring pin.

Caution
Remove the pin with care, as there is a danger that the spring may fly out.
BEARING RETAINER INSTALLATION

A pre-coated bolt is used for the bearing retainer, so if it is being reused, apply specified sealant to the thread section of the bearing retainer, and then install the bearing retainer.

**Specified adhesive:**
- 3M STUD Locking No.4170 or equivalent

SNAP RING INSTALLATION

When installing the snap ring, select the one with the maximum thickness that can fit in the groove.

**Standard value:**
- 0–0.08 mm (0–0.0031 in.)

2-4WD SYNCHRONIZER ASSEMBLY | CHAIN | FRONT OUTPUT SHAFT ASSEMBLY INSTALLATION

1. Make a mark with white paint, etc., in the grooves of the 2-4WD synchronizer (3 places).
2. Make a mark with white paint, etc., on the spline projections of the 2-4WD synchronizer sleeve (3 places).
3. Link the chain tightly onto the 2-4WD synchronizer and the front output shaft sprockets.
4. Install both sprockets to the transfer case at the same time, while keeping them at the maximum distance apart.
**D** SNAP RING INSTALLATION
Select the thickest snap ring that will fit into the groove and install it.

Standard value: 0–0.06 mm (0–.0024 in.)

**E** 2-4WD SHIFT RAIL / 2-4WD SHIFT LUG / SPRING RETAINER / SPRING / SPRING PIN INSTALLATION
(1) Install the spring retainer and spring to the shift rail, and set it to the shift lug inside the transfer case.
(2) Press the shift rail and align the shift lug and the spring pin hole of the shift rail, while being careful of the direction of the shift rail.
(3) While pressing the rail, tap in the spring pin so that the slit of the spring pin is facing the shaft centre of the shift rail.

**F** THRUST WASHER INSTALLATION
Install the thrust washer so that the tab fits into the groove of the transfer case.

**G** COUNTER GEAR SHAFT INSTALLATION
Insert the counter gear shaft from the transmission case side, being careful of the position of the lock plate groove.

**H** REAR OUTPUT SHAFT ASSEMBLY / CHAIN / FRONT OUTPUT SHAFT ASSEMBLY INSTALLATION
(1) Engage the chain precisely with the sprockets of the rear output shaft and the front output shaft.
(2) Install the 2-4WD shift fork on the 2-4WD clutch sleeve. While passing them along the 2-4WD shift rail, install the rear and front output shaft and chain.
COVER / WAVE SPRING (SPACER) INSTALLATION

(1) Measure the amount of protrusion of the front output shaft rear bearing “A” and the amount of inset of the cover “B”. If the value of “B” exceeds the value of “A” by 2 mm (.08 in.), add a spacer in between the wave spring and the cover. If the difference is less than 2 mm (.08 in.), the wave spring by itself is okay.

(2) Apply specified sealant to the cover and the thread section of the mounting bolt, and then install the cover.

Specified sealant, adhesive:
3M ATD Part No. 8660 or equivalent . . . . Cover
3M STUD Locking No. 4170 or equivalent . Bolt

Caution
Apply the proper amount of sealant evenly.

COVER GASKET / COVER INSTALLATION

(1) Measure the projection (A) of the rear bearing from the end of the front output shaft and the depth (B) of indentation in the cover. If the clearance (a difference between A and B) exceeds 2 mm (.08 in.) insert a spacer between the cover and the wave spring. If the clearance is 2 mm (.08 in.) or less, use the wave spring alone.

(2) Apply specified sealant to both sides of the cover gasket.

Specified sealant:
3M ATD Part No. 8660 or equivalent

(3) Install the cover.

(4) Apply the specified adhesive to the threaded part of the cover installation bolt.

Specified adhesive:
3M STUD Locking No. 4170 or equivalent

(5) Tighten the cover installation bolt at the specified torque.
**L.** **CHAIN COVER INSTALLATION**

Install the chain cover so that the end of the oil guide may enter the hole shown in the illustration.

**M.** **CHAIN COVER / INTERLOCK PLUNGER INSTALLATION**

1. Insert the interlock plunger in a position so that it does not interfere with the 2-4WD shift rail.
2. Apply specified sealant to the chain cover, and then install the chain cover.

   Specified sealant:
   - 3M ATD Part No. 8660 or equivalent

   Caution
   - Apply the proper amount of sealant evenly.

**N.** **H-L SHIFT RAIL INSTALLATION**

1. Shift the 2-4WD shift rail to the 4WD position.
2. Insert the H-L shift rail from the case and pass the rail through the shift fork.

**O.** **H-L SHIFT RAIL / SPRING PIN FOR H-L SHIFT FORK INSTALLATION**

1. Insert the H-L shift rail from the H-L shift rail hole, being careful of the direction of the shift rail.
2. Align the spring pin holes on the shift rail and the shift fork, and tap in the spring pin so that the slit of the spring pin is facing the shaft centre of the shift rail.
**U** SPACER INSTALLATION

Measure the amount of protrusion of the rear output shaft bearing “A” and the amount of inset of the two stages of the cover “B”. Calculate the value “C” by subtracting “B” from “A”, and then select a snap ring which adjusts the difference between the value of “C” and the thickness of the spacer to the standard value below.

**V** SPACER | REAR COVER GASKET | REAR COVER INSTALLATION

(1) Measure the amount of protrusion of the rear output shaft rear bearing “A” and the amount of inset in the cover “B”. Select a spacer which adjusts the end play to the standard value.

**Standard value:** 0–0.1 mm (0–0.004 in.)

(2) Apply sealant to both sides of the rear cover gasket.

**Specified sealant:**

3M ATD Part No.8660 or equivalent

**W** REAR COVER INSTALLATION

Apply specified sealant to the rear cover, and then install the cover.

**Specified sealant:**

3M ATD Part No.8660 or equivalent

**Caution**

Apply the proper amount of sealant evenly.

**X** SPEEDOMETER GEAR INSTALLATION

Match the mating marks to the number of teeth.
- **R** **SPACER INSTALLATION**
  
  Measure the clearance “B” between the chain cover and the snap ring of the ball bearing, and select the spacer according to the thickness gained by adding the following standard value to clearance “B”. Then, assemble the spacer.
  
  **Standard value:**
  
  0.02–0.1 mm (.0008–.0039 in.)

- **S** **OIL SEAL INSTALLATION**

- **T** **OIL SEAL INSTALLATION**
  
  Apply transmission oil to the lip of the oil seal before press-fitting.
H-L SHIFT FORK (V5MT1-3, V5MT1-6)

DISASSEMBLY AND REASSEMBLY

Disassembly steps
- 1. Return spring plug
- 2. Return spring
- 3. Return spring
- 4. Select plunger
- 5. Plunger boss
- 6. H-L shift fork

REASSEMBLY SERVICE POINT

RETURN SPRING PLUG INSTALLATION

Apply specified sealant to the return spring plug, and screw in the plug until it is flush with the end of the plunger boss.

Specified sealant:
- 3M Super Weatherstrip No.8001 or equivalent

Lubricate all internal parts with gear oil during reassembly.
SEALANT APPLICATION TO POPPET PLUG
Apply specified sealant to the poppet plug, and then install the poppet plug.
Specified sealant:
3M ATD Part No.8860 or equivalent

SEALANT APPLICATION TO PLUG
A pre-coated plug is used, so if it is being re-used, apply specified sealant to the thread section, and then install.
Specified sealant:
3M ATD Part No.8660 or equivalent

DETECTION SWITCH INSTALLATION
Be careful not to make a mistake when installing.
A: Ball built-in, brown connector
B: Balli built-in, black connector
C: Ball separate, brown connector
D: Ball separate, black connector
E: Ball separate, white connector

SPRING PIN INSTALLATION
REAR OUTPUT SHAFT (V5MT1-2)

DISASSEMBLY AND REASSEMBLY

Lubricate all internal parts with gear oil during reassembly.

Disassembly steps:
1. Snap ring
2. Clutch hub
3. Low speed gear
4. Bearing spacer
5. Needle bearing
6. Lock nut
7. Radial ball bearing
8. Sprocket spacer
9. Steel ball
10. Drive sprocket
11. Needle bearing
12. Sprocket sleeve
13. Steel ball
14. Clutch sleeve
15. Clutch hub (2-4WD)
16. Stopper plate
17. Ball bearing
18. Rear output shaft

DISASSEMBLY SERVICE POINTS

A. CLUTCH HUB REMOVAL

NOTE
Removal is sometimes possible without using a press.
(1) Place the special tool so that the load is applied at the low-speed gear.
(2) Use a press to push at the front edge of the rear output shaft and then remove the hub and gear.

B. LOCK NUT REMOVAL

Use a chisel to crimp the lock nut.
FRONT OUTPUT SHAFT
DISASSEMBLY AND REASSEMBLY

Lubricate all internal parts with gear oil during reassembly.

Disassembly steps
1. Ball bearing
2. Ball bearing
3. Front output shaft

DISASSEMBLY SERVICE POINT
▲ BALL BEARING REMOVAL

REASSEMBLY SERVICE POINT
▲ BALL BEARING INSTALLATION

TSB Revision
RADIAL BALL BEARING INSTALLATION

NOTE
The engagement of the radial ball bearing with the shaft may be loose, so that installation is possible without using a press.

LOCK NUT INSTALLATION

(1) Using the special tool, tighten the lock nut at the special torque.

(2) Using a punch, crimp the lock nut at the groove in the rear output shaft.

CLUTCH HUB INSTALLATION

Install the hub to the rear output shaft so that the hub faces in the direction indicated in the illustration.

SNAP RING INSTALLATION

Select the thickest snap ring that will fit into the groove in the front end of the rear output shaft and install it.

Standard value: 0–0.08 mm (0–.0031 in.)
C. RADIAL BALL BEARING REMOVAL

NOTE
The engagement of the bearing with the shaft may be loose, so that removal is possible without using a press.

D. CLUTCH HUB (2-4WD) / BALL BEARING REMOVAL

NOTE
The 2-4WD clutch hub is sometimes removable without using a press.

(1) Place the special tool so that the load is applied at the bearing.
(2) Use a press to push at the rear edge of the rear output shaft, and then remove the hub and bearing.

REASSEMBLY SERVICE POINTS

A. BALL BEARING / STOPPER PLATE INSTALLATION

(1) Place the stopper plate on the bearing.
(2) Use the special tool to install the ball bearing to the rear output shaft.

B. CLUTCH HUB (2-4WD) INSTALLATION

Install the hub to the rear output shaft so that the hub faces in the direction indicated in the illustration.
Center Differential Case (V5MT1-3, V5MT1-6)

Disassembly and Reassembly

Disassembly steps

1. Center differential case front
2. Dowel pin
3. Pinion
4. Thrust washer
5. Pinion shaft
6. Center differential case rear

Reassembly Service Point

Center Differential Case Front Installation

Install so that the mating marks on the outside are aligned, being careful of the position of the dowel pin.

Lubricate all internal parts with gear oil during reassembly.
REAR OUTPUT SHAFT (V5MT1-3, V5MT1-6)
DISASSEMBLY AND REASSEMBLY

Disassembly steps
1. Snap ring
2. Ball bearing
3. Viscous coupling
4. Rear output shaft

DISASSEMBLY SERVICE POINT
• A BALL BEARING REMOVAL

REASSEMBLY SERVICE POINTS
• A BALL BEARING INSTALLATION

• B SNAP RING INSTALLATION
When installing the snap ring, select the one with the maximum thickness that can fit in the groove.

Standard value:
0–0.08 mm (0–.0031 in.)
REASSEMBLY SERVICE POINTS

A. INNER SYNCHRONIZER RING INSTALLATION
After applying transmission oil to the surface of the synchronizer ring cone, install the cone.

B. OUTER SYNCHRONIZER RING INSTALLATION
After applying transmission oil to the surface of the synchronizer ring cone, install the cone.

C. SNAP RING INSTALLATION
When installing the snap ring, select the one with the maximum thickness that can fit in the groove.

Standard value:
0–0.08 mm (0–.0031 in.)
2-4WD SYNCHRONIZER (V5MT1-3, V5MT1-6)

DISASSEMBLY AND REASSEMBLY

Disassembly steps

1. Snap ring
2. 2-4WD synchronizer hub
3. Synchronizer spring
4. Outer synchronizer ring
5. Synchronizer cone
6. Inner synchronizer ring
7. Drive sprocket
8. Needle bearing
9. Front drive pinion

Inspector SYNCHRONIZER RING / SYNCHRONIZER CONE

Install the inner and outer synchronizer rings and the cone to the drive sprocket, and measure dimension A shown in the illustration. If dimension A is smaller than the limit, replace the part as a unit.

Limit: 0.3 mm (.012 in.)

NOTE

The scratches on the surface of the cone showing the direction of rotation are caused by the liner of the synchronizer ring. Therefore, if the above clearance is sufficient, it is not necessary to replace the parts.
SNAP RING INSTALLATION

When installing the snap ring, select the one with the maximum thickness that can fit in the groove.

Standard value:
0–0.08 mm (0–.0031 in.)
TRANSFER DRIVE SHAFT (V5MT1-3, V5MT1-6)

DISASSEMBLY AND REASSEMBLY

Lubricate all internal parts with gear oil during reassembly.

Disassembly steps

1. Snap ring
2. H-L clutch hub
3. Low speed gear
4. Bearing spacer
5. Needle bearing
6. Ball bearing
7. Transfer drive shaft

GENERAL INFORMATION

The F5MC1 transaxle internal components can only be serviced by separating the gear case from the bellhousing case. The transaxle output shaft is serviced as a unit, no disassembly and reassembly is possible. Damage to the transaxle may result.

TSB Revision
CASE DISASSEMBLY

(1) Place transaxle on bench.
(2) Remove shift levers. Remove transaxle case half bolts.

(3) Place two screwdrivers in the slots provided in the case halves near the dowels. Separate the case halves.

(4) Remove bell housing case half, from gear case half.

(5) Remove output shaft roller bearing from output shaft.
(6) Remove differential assembly.

</tbody>
</table>
(10) Pull the selector shaft shift pin out of the slot in the blocker assembly. Turn selector shaft up and out of the way.

(11) Remove transaxle end cover.

(12) Remove two snap rings retaining the output shaft and the input shaft to the bearing.

(13) Using bench fixture and shims provided (MB995023, MB995024, MB995025), turn transaxle over. Install transaxle onto bench fixture. Verify shim spacers are in position on bench fixture. Install transaxle into shop press.
(7) Remove reverse idler shaft bolt.

Remove reverse idler gear.

(8) Remove two screws retaining reverse fork bracket.

Remove reverse fork bracket and reverse cam blockout assembly.

(9) Using snap ring pliers, remove selector shaft spacer.
(19) Remove the shift blocker assembly from the bench fixture.
(14) Install bearing fixture (MB995056) onto transaxle end bearings. Verify tool is properly aligned to input and output shaft.

**Caution**
The oil dams in the input and output shaft can be damaged while pressing on the shafts if the bearing fixture is not properly used.

(15) Install transaxle gear case and bench fixture onto shop press. Press output and input shaft assemblies out of case.

(16) Remove transaxle from press.

(17) Carefully remove transaxle case from the shaft assemblies and bench fixture. Make sure the oil feed trough to end bearings is not damaged.

(18) Remove the reverse brake blocking ring, shim, reverse brake friction cone, bearing and race from the input shaft assembly.
(2) Remove synchronizer and gear using shop press.

(3) Remove caged needle bearing.

(4) Remove 4-5 gears split thrust washer ring.

(5) Remove split thrust washer.

(6) Remove split thrust washer separation pin.
(20) Remove the 1-2 shift fork from the output shaft.

(21) Remove input and output shaft assemblies from bench fixture.

Caution
The output shaft assembly is serviced as an assembly. Do not try to repair any component on the output shaft. If the 1/2 synchronizer or gear fails, it is necessary to replace the complete output shaft assembly.

INPUT SHAFT DISASSEMBLY

Before disassembly of the input shaft, it is necessary to check the synchronizer stop ring gap. Use a feeler gauge to measure the gaps between the stop rings and the speed gears. The correct gaps are listed below:

1st 1.04–1.72 mm (.0409–.0677 in.)
2nd 0.94–1.72 mm (.0370–.0677 in.)
3rd 1.37–1.93 mm (.0539–.0760 in.)
4th 1.41–1.97 mm (.0555–.0776 in.)
5th 1.37–1.93 mm (.0539–.0760 in.)

If a stop ring gap does not fall within the specifications it must be inspected for wear and replaced. If the 1st or 2nd synchronizer stop ring is worn beyond specifications, the complete output shaft assembly must be replaced.

The input shaft incorporates the 3rd, 4th, and 5th speed gears and synchronizers on the assembly.

(1) Install MD998801 behind 5th speed gear. Remove snap ring at 5th synchronizer hub on input shaft.
OUTPUT GEAR DISASSEMBLY

Caution
The output shaft assembly is serviced as an assembly. Do not try to repair any component on the output shaft. If the 1/2 synchronizer or gear fails, it is necessary to replace the complete output shaft assembly.

It is necessary to check the synchronizer stop ring gap. Use a feeler gauge to measure the gaps between the stop rings and the speed gears. The correct gaps are listed below:

- 1st: 1.04–1.72 mm (0.0409–0.0677 in.)
- 2nd: 0.94–1.72 mm (0.0370–0.0677 in.)
- 3rd: 1.37–1.93 mm (0.0539–0.0760 in.)
- 4th: 1.41–1.97 mm (0.0555–0.0776 in.)
- 5th: 1.37–1.93 mm (0.0539–0.0760 in.)

If a stop ring gap does not fall within the specifications it must be inspected for wear and replaced. If the 1st and 2nd synchronizer stop ring is worn beyond specifications, the complete output shaft assembly must be replaced.

The output shaft incorporates the 1st and 2nd gears and synchronizers on the assembly.

TRANSAXLE CLEANING AND INSPECTION

Clean the gears, bearings, shafts, synchronizers, thrust washers, oil feeder, shifter mechanism, gear case, and bellhousing with solvent. Dry all parts except the bearings with compressed air. Allow the bearings to either air dry or wipe them dry with clean shop towels.

Inspect the gears, bearings, shafts and thrust washers. Replace the bearings and cups if the rollers are worn, chipped, cracked, flat spotted or brinnelled, or if the bearing cage is damaged or distorted. Replace the thrust washers if cracked, chipped, or worn. Replace the gears if the teeth are chipped, cracked, or wore thin. Inspect the synchronizers. Replace the sleeve if worn or damaged in any way. Replace the stop rings if the friction material is burned, flaking off, or worn. Check the condition of the synchronizer keys and springs. Replace these parts if worn, cracked, or distorted.
(7) Remove 4th gear.

(8) Remove 4th gear caged needle bearing. Check the caged needle bearing for a broken retention spring.

(9) Remove blocking ring. Remove 3/4 synchronizer hub retaining snap ring.

(10) Install input shaft in shop press. Using MD998801 to remove 3/4 synchronizer and 3rd gear.

(11) Remove 3rd gear caged needle bearing. Check the caged needle bearing for a broken retention spring.

(12) Inspect the input shaft for worn or damaged bearing races or chipped gear teeth. Replace as necessary.
Caution
Always install new ring gear bolts. Tighten ring gear bolts to 81 Nm (80 ft.lbs.) torque.

Remove the roll pin using a pin punch, etc.

Remove the pinion shaft.

Remove the pinion gear, side gear and thrust washer.

Assemble the differential side gears, pinion gears and pinion gears with the pinion gear washers. Rotate the assembly two full revolutions both clockwise and counterclockwise.
DIFFERENTIAL OVERHAUL

Shim thickness need only be determined if any of the following parts are replaced:
- Transaxle gear case
- Clutch bellhousing case
- Differential case
- Differential bearing

Refer to Bearing Adjustment Procedure at the end of this section to determine proper shim thickness. This will provide correct bearing preload and proper bearing turning torque.

Install the bearing cone using the special tool.

Install the differential bearing cone using the special tool.

Install the bearing cone using the special tool.
ASSEMBLY

1. Position synchronizer hub onto a suitable holding fixture (input shaft). The synchronizer hubs are directional. The hubs must be installed with the U facing upward.

2. Install springs into hub slot

3. Insert key into hub and spring.

4. Apply petroleum jelly to the hole in the key. Insert balls into each key.

5. Slide sleeve over the hub and depress balls as you carefully slip the sleeve into position.

6. Line up stop ring tang over the keys in the hub. Install stop rings. Center the keys and balls by pushing on both stop rings.
Set up dial indicator as shown and record end play. Rotate side gear 90 degrees and record another end play. Again, rotate side gear 90 degrees and record final end play. Using the smallest end play recorded, shim that side gear to within 0.25 mm (0.0098 in.) to 0.33 mm (0.0130 in.). The other side gear should be checked using the same procedure.

Caution
Side gear end play must be within 0.25—0.33 mm (0.0098—0.0130 in.). Five select thrust washers are available: 0.69 mm (0.0272 in.), 0.81 mm (0.0319 in.), 0.94 mm (0.0370 in.), 1.07 mm (0.0421 in.) and 1.19 mm (0.0469 in.).

SYNCHRONIZER OVERHAUL

DISASSEMBLY
Place synchronizer in a clean shop towel and wrap. Press on inner hub. Carefully open up shop towel and remove springs, balls, keys, hub, and sleeve.

CLEAN
Do not attempt to clean the blocking rings in solvent. The friction material will become contaminated. Place synchronizer components in a suitable holder and clean with solvent. Then let them air, dry.

INSPECT
Proper inspections of components involved:
Teeth, for wear, scuffed, nicked, burred or broken teeth keys, for wear or distortion
Balls and springs, for distortion, cracks or wear
If any of these conditions exists in these components, replace as necessary.
OUTPUT BEARING REMOVAL

(1) Note the position of the output shaft bearing.
The bearing is not identical end to end.
Remove caged roller bearing from output bearing race.

(2) Remove screws at output bearing retainer strap.

(3) Install tool MB995031, MB995052. Tighten tool to output bearing race.
**SHIFTER RAILS OVERHAUL**

1. Disassemble the transaxle case using the procedures provided in this group.
2. Remove shifter rails from the gear train.
3. To service the 5/R shift rail, remove the C-clip retaining the reverse shift lever arm. Remove the 5th shift fork roll pin and remove the 5th shift fork. Remove the shift lug roll pin and remove the shift lug. Replace parts as necessary.
4. To service the 3/4 shift rail, remove the roll pin retaining the 3/4 shift fork. Remove the shift fork. Remove the shift lug roll pin and remove shift lug. Replace parts as necessary.
5. To service the 1/2 shift rail, remove the roll pin retaining the 1/2 shift fork. Remove the shift fork and replace parts as necessary.

**GEAR CASE OVERHAUL**

The sealant used to seal the transaxle case halves is Loctite 51817 or equivalent. The sealant used for the bearing end plate cover is Loctite 18718 or equivalent.

The components that are left in the gear cases when the gear train is pulled out are the:
- Axle shaft seals
- Output bearing race and retainer
- Input bearing and sleeve
- Differential bearing cones
- Shifter rail bushings
- Shifter shafts
- Shifter shaft seals
- Shifter shaft bushings
- Rear bearing oil feed trough

**AXLE SHAFT SEALS**

**REMOVAL**

1. Insert a flat blade pry tool at outer edge of axle shaft seal.
2. Tap on the pry tool with a small hammer and remove axle shaft seal.

**INSTALLATION**

1. Clean axle shaft seal bore of any excess sealant.
2. Align axle shaft seal with axle shaft seal bore.
3. Install axle seal on tool MD998812,MD998826 and insert into axle shaft seal bore.
4. Tap seal into position.
DIFFERENTIAL BEARING CUPS

REMOVAL
(1) Install MB995048 into the differential bearing cup.

(2) Install the tool cup over the tool.
(3) Tighten the tool until the race is removed from the case.

INSTALLATION
(1) Position the bearing cup into the case.
(2) Install the bearing cup onto MB990933.
(3) Using MB990933, MB990938 driver, install differential bearing cup into the transaxle case.

SHIFTER RAIL BUSHINGS

REMOVAL
(1) Thread tool MB995040 into shifter rail bushing.
(2) Install MB995031 onto tool.
(3) Remove bushing using slide hammer and tool assembly.

INSTALLATION
(1) Line up replacement bushing in bore.
(2) Using tool MD998343, tap bushing into bore until flush with the chamfer in the case.
INSTALLATION

1. Line up output bearing race to race bore.
2. Insert tool MB990933, MB990938 into output bearing race. Tap race into bore. Position bearing retaining strap. Tighten bolts to 11 Nm (96 in.lbs.).

INPUT BEARING AND SLEEVE

The input bearing is a one-piece bearing and sleeve unit. The sleeve is the slide point for the clutch release bearing and lever.

REMOVAL

1. Install tool MB990927, MB990938 over input bearing on the gear case side of the transaxle clutch housing.
2. Tap the input bearing out of the housing.

INSTALLATION

1. Apply coating of Loctite sealant on bearing outer diameter. Position sleeve and bearing assembly at input bearing bore.
2. Install tool MB995033 over input bearing.

3. Using the spacer tool and shop press, install input bearing into bore until it is fully seated.
INSTALLATION
(1) Position replacement bushing over selector shaft bore.
(2) Using an appropriate size deep well socket, install bushing in selector shaft bore.

SHIFTER CROSSOVER SHAFT BUSHING
REMOVAL
(1) Install MB995031 through the crossover bushing.
(2) Thread nut and washer onto MB995031.
(3) Using the MB995031, remove the crossover shaft bushing.

INSTALLATION
(1) Position the replacement crossover shaft bushing over the crossover shaft bushing bore.
(2) Using an appropriate size deep well socket, install the crossover shaft bushing into the bushing bore.

REAR BEARING OIL FEED TROUGH
REMOVAL
The bearing oil feed trough is retained in the case by a pin that is molded into the case and clips that are part of the trough.
(1) Using light plier pressure, squeeze the clips together at the rear of the trough.
(2) Slide the trough over the retaining pin that locates the trough in the case.
Reverse removal procedure to install oil feed trough.

INPUT SHAFT REASSEMBLY
The snap rings that are used on the input shaft are available in select fit sizes. Use the thickest snap ring that will fit in each snap ring groove.
(1) Place input shaft into shop press.
(2) Install 3rd gear caged needle bearing on input shaft.
SHIFTER SHAFT SEALS
It is not necessary to remove the shifter shafts from the transaxle to service the shifter shaft seals.

REMOVAL
(1) Using a pick tool, pry up on the shifter shaft seal and remove seal from bore.

INSTALLATION
(1) Position new shifter shaft seal in bore.
(2) Install shifter shaft seal into bore using an appropriate size deep well socket.

SHIFTER SELECTOR SHAFT REMOVAL
(1) With the transaxle disassembled, remove the selector shaft by pushing on the shaft from the outside and pulling shaft out from the inside.
Reverse removal procedure to install selector shaft.

SHIFTER CROSSOVER SHAFT REMOVAL
(1) With the transaxle disassembled, remove the crossover shaft seal.
(2) Using snap ring pliers, remove the snap ring at the crossover shaft bore.
(3) Push the crossover shaft in the case and remove the crossover assembly.
Reverse removal procedure to install crossover shaft.

SHIFTER SELECTOR SHAFT BUSHING REMOVAL
(1) Thread MB995040 into bushing.
(2) Install MB995031 onto tool and remove bushing using slide hammer.
(8) Install split thrust washer onto input shaft.

(9) Install split thrust washer retaining ring.

(10) Install 5th gear caged needle bearing.

(11) Using MD998812, MD998821, install 5th speed gear and synchronizer. The 5th gear synchronizer hub has the letter “S” stamped on the top face of the hub. This designates that hub must be installed with the “S” facing upward.

(12) Install 5th gear synchronizer snap ring.
(3) Install 3rd gear and 3/4 synchronizer onto input shaft. Install MD998812, MD998813, MD998821 over input shaft and press on synchronizer hub and 3rd gear. The synchronizer hub has the letter “U” stamped on the top face of the hub. This designates that the hub must be installed with the “U” facing upward.

(4) Install 3/4 synchronizer snap ring into slot on input shaft.

(5) Install blocking ring into 3/4 synchronizer. Install 4th gear caged needle bearing.

(6) Install 4th gear onto input shaft.

(7) Install 4/5 split thrust washer separation pin.
(6) Install reverse brake blocking ring.

(7) Install reverse brake friction cone.

(8) Install reverse brake shim. Apply petroleum jelly to shim to hold in place.

(9) Install gear case half over pallet fixture. Line up shift finger over 3/4 lug.

(10) Line up reverse brake friction cone lug to the slots in the gear case. Verify reverse brake shim is in position.
CASE REASSEMBLY

The sealant used to seal the transaxle case halves is Loctite 51817 or equivalent. The sealant used for the bearing end plate cover is Loctite 18718 or equivalent.

1. Verify bench fixture shims are removed from bench fixture. Install output and input gear into pallet fixture (MB995025).

2. Install shift rails and forks into bench fixture.

3. Install shift blocker assembly into bench fixture.

4. Install reverse brake race onto input gear.

5. Install reverse brake needle bearing.
(19) Install reverse fork bracket and reverse cam lockout assembly. Tighten screws to 11 Nm (96 in. lbs.) torque.

(20) Install differential into gear case.

BEARING ADJUSTMENT PROCEDURE

GENERAL RULES ON SERVICING BEARINGS

(1) Take extreme care when removing and installing bearing cups and cones. Use only an arbor press for installation, as a hammer may not properly align the bearing cup or cone. Burrs or nicks on the bearing seat will give a false end play reading while gauging for proper shims. Improperly seated bearing cups and cones are subject to low mileage failure.
(11) Position input and output bearings on the shafts. Using MB995058, press input and output shaft bearings until they bottom into the case and against the shafts.

(12) Install shaft snap rings at input and output bearings.

(13) Apply Loctite 18718 or equivalent to end cover outer edge and around bolt holes. Install end cover onto gear case. Tighten end cover bolts to 29 Nm (21 ft.lbs.) torque.

(14) Remove gear case from bench fixture.

(15) Install gear case in a holding fixture with end cover facing down.

(16) Turn selector shaft into slot on shift blocker assembly.

(17) Push selector shaft spacer clip onto selector shaft. Install shift levers.

(18) Install reverse idler gear and shaft. Install bolt into shaft. Tighten bolt on shaft to 26 Nm (19 ft.lbs.) torque.
(10) Using MB995038 and an inch-pound torque wrench, check turning torque of the differential assembly clockwise and counterclockwise. The turning torque should be 68 to 136 Ncm (6 to 12 in.lbs). If the turning torque is too high, install a 0.5 mm (.020 in.) thinner shim. If the turning torque is too low, install a 0.5 mm (.020 in.) thicker shim.

(11) Recheck turning torque. Repeat Step (10) until the proper turning torque is obtained.
(2) Bearing cups and cones should be replaced if they show signs of pitting or heat distress. If distress is seen on either the cup or bearing rollers, both cup and cone must be replaced.

(3) Bearing preload and drag torque specifications must be maintained to avoid premature bearing failures. Used (original) bearing may lose up to 50% of the original drag torque offer break in. All bearing adjustments must be made with no other component interference or gear intermesh.

(4) Replace bearings as a pair. For example, if one differential bearing is defective, replace both differential bearings. If one input shaft bearing is defective, replace both input shaft bearings.

(5) Bearing cones must not be reused if removed.

(6) Turning torque readings should be obtained while smoothly rotating in either direction.

DIFFERENTIAL BEARING PRELOAD ADJUSTMENT

True bearing turning torque readings can only be obtained with the gear train removed from the case.

(1) Remove bearing cup and existing shim from clutch bellhousing case.

(2) Press in new bearing cup into bell housing case (or use a cup that has been ground down on the outer edge for ease of measurement).

(3) Press in new bearing cup into gear case side.

(4) Lubricate differential bearings with SAE 5W-30 engine oil. Install differential assembly in transaxle gear case. Install clutch bell housing over gear case. Install and torque case bolts to 29 Nm (21 ft.lbs.).

(5) Position transaxle with bell housing facing down on workbench with C-clamps. Position dial indicator.

(6) Apply a medium load to differential with MB995038 and a T-Handle, in the downward direction. Roll differential assembly back and forth many times. This will settle the bearings. Zero dial indicator. To obtain end play readings, apply a medium load in the upward direction while rolling differential assembly back and forth. Record end play.

(7) The shim required for proper bearing preload is total of end play and (constant) preload of 0.18 mm (.0071 in.).

(8) Remove case bolts. Remove clutch bell housing differential bearing cup. Install shim(s) selected in step (7). Then press the bearing cup into clutch bell housing.

(9) Install and torque case bolts to 26 Nm (19 ft.lbs.).
